<b>Sealite Lantern Warranty</b>	<b>16</b>

### **Introduction**

Congratulations! By choosing to purchase a Sealite lantern you have become the owner of one of the most advanced LED marine lanterns in the world.

Sealite Pty Ltd has been manufacturing lanterns for over 20 years, and particular care has been taken to ensure your lantern gives years of service.

As a commitment to producing the highest quality products for our customers, Sealite has been independently certified as complying with the requirements of **ISO 9001:2000** quality management system.

Sealite lanterns comply with requirements of the US Coast Guard in 33 CFR part 66 for Private Aids To Navigation.

By taking a few moments to browse through this booklet, you will become familiar with the versatility of your lantern, and be able to maximise its operating function.

Please remember to complete the Sealite warranty registration card accompanying your lantern.

## **Operating Principle**

The solar module of the lantern converts sunlight to an electrical current that is used to charge the battery. The battery provides power to operate the lantern at night.

The flasher unit has very low current requirements. A microprocessor drives an array of ultra bright LED's through a DC/DC converter, which enables the LED's to operate within the manufacturer's specifications. The battery is protected from over-charging within the circuit to ensure maximum battery life.

On darkness, the microprocessor will initiate a program check and after approximately 1 minute begin flashing to the set code.

## **Technology**

### **Electronics**

Sealite employs leading in-house electronic engineers in the design and development of software and related circuitry. All individual electronic components are sourced directly by Sealite procurement staff ensuring that only the highest quality components are used in our products.

### **LED Technology**

All marine lanterns use the latest advancements in LED (Light Emitting Diode) technology as a light source. The major advantage of LED's over traditional light sources is well established in that they typically have an operational life in excess of 100,000 hours, resulting in substantial savings to maintenance and servicing costs.

### **Moulding Techniques**

Sealite's rotational moulding experience is reflected in the wide range of buoy products offered and their unique structures designed to increase overall strength and ease of use, including in-moulded cross bracing and in-mould graphic applications.

### **Precision Construction**

Commitment to investing in the design and construction of injection-moulded parts including optic lenses, light bases and a range of other components ensures that all Sealite products are of a consistent and superior quality.

### **Optical Performance**

Sealite manufactures a range of marine LED lenses moulded from multi-cavity dies. Complex shapes such as the SL70 lens are a testament to the company's superior in-house lens manufacturing capabilities and outstanding optical performance.

### **Award-winning, Patented Technology**

Several United States and Australian patent registrations are held on Sealite's range of innovative designs, with other regional patents pending in Canada, United Kingdom and Europe.

## SLC310 Model

The Sealite SLC310 compact 3nm solar marine lantern is completely self-contained, and specifically designed for a range of low maintenance applications. The light boasts a large internal battery compartment, a 20 LED flasher unit, and 4 premium-grade solar modules mounted to collect sunlight at all angles.

The battery and driving circuitry is conveniently accessed from the top of the lantern assembly – allowing for easy battery replacement at any stage of the products life.

Fig 1. SLC310 Solar Marine Lantern

## Installation of SLC310 Model

Lantern is activated by connecting the battery terminals. Flash setting needs to be set prior to activation.

Item	Description	Qty
1	SLC310 Base	1
2	SLC310 Lens Assembly	1
3	Battery 12v 7.5Ah	1
4	Battery Clamp	1
5	Washer M5	2
6	Wing Nut M5	2
7	O-Ring, Ø130 x 4.0	1
8	Socket Head Screw M6 x 16	4
9	Protective Sleeve for Base	4

Fig 2. SLC310 Solar Marine Lantern components

1. Remove the four socket-head screws on the top lens assembly and open.
2. Adjust the Intensity setting using the DIP switches (detailed below)
3. Adjust the Flash Code with the rotary switches located on the underside of the light head.
4. Adjust the rotary switches (A and B) to desired flash setting (see 'Selecting a Flash Code', below).
5. Connect the 4-pin connector ends together to power up the unit.
6. The unit is now ready for normal operation, once placed in darkness.
7. Close the light head, and replace 4 socket head screws.
8. To test place dark cover (towel or jacket) on top of light to activate sensor, light will come on.
9. Ensure that the unit is bolted to an even, flat surface.

### Selecting an Intensity Setting

Pulse settings on Sealite lanterns operate via DIP switches, located near the rotary switches on the flasher unit. The pulse settings may be used to reduce the power consumption and intensity of the lantern. Setting the lantern to 25% pulse will reduce the power consumption to 25% of the normal 100% setting and the range by 50%. This setting may be used to adjust to local sunlight conditions.

The following diagrams indicate pulse settings:-

### Selecting a Flash Code- Rotary Switches A and B

All lanterns have 2 rotary switches marked A and B on the flasher unit, as below. Turning the small arrows to the appropriate number or letter will set the code (see 'Flash Code' section, page 8). The unit may take up to one minute to activate a new flash code. A comprehensive list of available flash codes is listed on pages 8-14 of this manual.

#### Rotary Switches A and B

## **Maintenance and Servicing**

Designed to be almost maintenance-free, the SLC310 requires minimal attention, though the following maintenance and servicing information is provided to help ensure the life of your Sealite product.

1. Cleaning Solar Panels- occasional cleaning of the solar panels may be required. Using a cloth and warm soapy water, wipe off any foreign matter before rinsing the panels with fresh water.
2. Battery Check- inspection of batteries should be performed every three years (minimum) to ensure that the charger, battery and ancillary electronics are functioning correctly. Using a voltage meter, check that the battery voltage is at least 12 volts under 100MA load, and ensure all terminals are clear of foreign matter.

### **Replacing the battery**

The SLC310 has an internal battery compartment which provides the user with the ability to change the battery after years of operation (see figure 2 on page 5).

1. Remove the four socket-head screws on the top lens assembly and open.
2. Disconnect the positive and negative wires from the battery.
3. Remove battery retaining plate and lift battery from cradle.
4. Discard old battery in a safe manner.
5. Reattach positive and negative wires to the new battery.
6. Replace the battery into the cradle, and re-affix retaining plate with two wing-nuts and washers.
7. Replace the lens assembly back onto lantern housing ensuring that no wiring is protruding, and screw four socket cap screws firmly. Ensure the o-ring seal is clean and clear from foreign matter.
8. To test place dark cover (towel or jacket) on top of light to activate sensor, light will come on.

***Care must be taken to observe the polarity of each wire before they are connected.  
To ensure waterproofing of the unit, make sure that no wires are protruding and that there is  
an even seal.***

***Always discard old batteries in a safe manner.***

## Flash Codes

**SEALITE® code reference is listed by number of flashes**

**For the latest version of this document, check:**

**<http://www.sealite.com.au>**

**E-mail: [info@sealite.com.au](mailto:info@sealite.com.au)**

### Symbols

- FL Flash followed by number eg. FL 1 S, one flash every second
- F Fixed
- Q Quick flash
- VQ Very quick flash
- OC Occulting; greater period on than off
- ISO Isophase; equal period on and off
- LFL Long flash long
- MO Morse code ( ) contains letter

For example, VQ (6) + LFL 10 S means 6 very quick flashes followed by a long flash, during a 10-second interval.

The amount of power your lantern draws through the night depends on the duty cycle, i.e. the amount of time on as a proportion to the timing cycle. For example, 0.5 seconds on and 4.5 seconds off equals a 10% duty cycle.

It is best to operate at the lowest duty cycle appropriate to the actual needs of the application.

Please note, Sealite models will retain full autonomy in normal operating conditions with duty-cycles up to approximately 30%. In applications whereby duty cycles exceed this limit, a reduction in lantern intensity is recommended. Please contact a Sealite consultant if assistance is required.

### Recommended Rhythm for Flashing Light - IALA Regions A and B

MARK DESCRIPTION	RHYTHM
<b>Port Hand &amp; Starboard Marks:</b>	Any, other than Composite Group Flashing (2+1)
<b>Preferred Channel Starboard:</b>	Composite Group Flashing (2+1)
<b>Preferred Channel Port:</b>	Composite Group Flashing (2+1)
<b>North Cardinal Mark:</b>	Very quick or quick
<b>East Cardinal Mark:</b>	Very quick (3) every 5 seconds or quick (3) every 10 seconds
<b>South Cardinal Mark:</b>	Very quick (6) + long flash every 10 seconds or quick (6) + long flash every 15 seconds
<b>West Cardinal Mark:</b>	Very quick (9) every 10 seconds or quick (9) every 15 seconds
<b>Isolated Danger Mark:</b>	Group flashing (2) e.g. FL (2) 10 S or FL (2) 5 S
<b>Safe Water Mark:</b>	Isophase, occulting, one long flash every 10 seconds or Morse Code "A"
<b>Special Marks:</b>	Any, other than those described for Cardinal, Isolated Danger or Safe Water Marks

## Trouble Shooting

### Problem

### Remedy

Lantern will not activate.	<ul style="list-style-type: none"> <li>• Ensure lantern is in darkness.</li> <li>• Wait at least 60 seconds for the program to initialise in darkness.</li> <li>• Ensure switch setting is on a valid code (not unused flash code).</li> <li>• Ensure battery terminals are properly connected.</li> <li>• Ensure battery voltage is above 12volts.</li> </ul>
Timing codes will not change.	<ul style="list-style-type: none"> <li>• Turn rotary switches several times to ensure contacts are clear.</li> </ul>
Lantern will not operate for the entire night.	<ul style="list-style-type: none"> <li>• Expose lantern to direct sunlight and monitor operation for several days. Sealite products typically require 1.5 hours of direct sunlight per day to retain full autonomy. From a discharged state, the lantern may require several days of operational conditions to 'cycle' up to full autonomy.</li> <li>• Reducing the light output intensity or duty cycle (flash code) will reduce current draw on the battery.</li> <li>• Ensure solar module is clean and not covered by shading during the day.</li> </ul>

## Sealite Lantern Warranty

### *Activating the warranty*

Upon purchase, the Sealite warranty must be activated for recognition of future claims. To do this you have two (2) options:

1. Postal registration
  - Please complete the Sealite Warranty Registration card and return to Sealite within 30 days of your purchase.
  
2. Online registration
  - Please complete the Online Registration form at;

[www.sealite.com.au](http://www.sealite.com.au) or [www.sealiteusa.com](http://www.sealiteusa.com)

Sealite Pty. Ltd. will repair or replace your lantern in the event of electronic failure for a period of three years from the date of purchase.

The unit must be returned to Sealite Pty. Ltd. freight prepaid.

### Warranty Conditions

1. The warranty is applicable to lanterns manufactured from 1/1/2000.
2. The lantern must be installed in accordance with Sealite instructions.
3. No modifications to the original specifications determined by Sealite shall be made without written approval of Sealite Pty. Ltd.
4. Input voltage shall not exceed those recommended for the product.
5. Warranty does not cover damage caused by the incorrect replacement of battery in the SL15, SL60 or SL70 lantern models.
6. Replacement of battery is excluded from the warranty.
7. No recognition shall be given to flooding, or damage incurred from misuse of lanterns.
8. Solar modules are covered by individual manufacturers' warranty.

Information in this manual is subject to change without notice and does not represent a commitment on the part of the vendor. Sealite products are subject to certain Australian and world-wide patent applications.
